IEE Proceedings

Generation, Transmission and Distribution

The Institution of Electrical Engineers, Savoy Place, London WC2R 0BL, United Kingdom
Publishing Department: Michael Faraday House, Six Hills Way, Stevenage, Herts. SG1 2AY, United Kingdom

Volume 142 1995 UK ISSN 1350–2360

HONORARY EDITORS

Prof. E.J. Handschin (*University of Dortmund*)
Prof. J.R. Smith (*University of Strathclyde*)

Pages in issues of *IEE Proc.-Gener. –Transm. Distrib.*, 1995

Pages	Issue No.	Date
1–96	1	January
97–224	2	March
225–336	3	May
337–444	4	July
445–548	5	September
549–660	6	November

Zunko, P. p257

ADAPTIVE CONTROL

Damping of subsynchronous oscillations using adaptive controllers tuned by artificial neural networks p415
Tracking constrained adaptive power system stabiliser p149

AUTOMATIC TEST SYSTEMS

Novel approach to alternator field winding interturn fault detection p97
Optical fibre investigation of the arc dynamics of a spiral arc current limiting interrupter p608

CABLES AND OVERHEAD LINES

Digital simulation of fault location on EHV lines using wideband spread spectrum techniques p73
Earth fault currents and potentials distribution in composite systems p135
Effect of radiative and convective heat transfer on thermal transients in power cables p436
Frequency-independent circuit model of earth return effects in transmission systems p143
Magnetic fields from transmission lines: comparison of calculations and measurements p481
Modelling and control of thyristor-controlled series compensators p297
New technique for the accurate location of earth faults on transmission systems p119
Simulation of transients on transmission lines with corona via the method of characteristics p81

CIRCUIT BREAKERS

An investigation into breaker reclosure strategy for adaptive single pole autoreclosing p601
Optical fibre investigation of the arc dynamics of a spiral arc current limiting interrupter p608

CIRCUIT THEORY AND DESIGN

Dynamic modelling of battery energy storage system and application to power system stability p429
Steady state model of the AC/DC convertor in the harmonic domain p109

CLOSED LOOP SYSTEMS

Line conditioning system with simple control strategy and fast dynamic response p128
Modelling and control of thyristor-controlled series compensators p297

COMPUTER APPLICATIONS

Artificial intelligence-based machine-learning system for thermal generator scheduling p195
Artificial neural network-based method for transient response prediction p323
Combined active reactive despatch. Part 2: test results p401
Controlled series compensation for improving the stability of multi-machine power systems p361
Distribution system service restoration using the artificial neural network approach and pattern recognition method p251
Fuzzy-logic-based VAr stabiliser for power system control p618
Hybrid expert system and simulated annealing approach to optimal reactive power planning p381
Modelling and control of thyristor-controlled series compensators p297
Neural network-based algorithm for power transformer differential relays p386
Novel approach to alternator field winding interturn fault detection p97
Optimal phase angles of booster transformers in HV and EHV in power systems p185
Reactive reserve management p17
Rule-based variable-gain power system stabiliser p29

CONTROL SYSTEM ANALYSIS

Anticipatory fuzzy control of power systems p211
Co-ordinated multimachine PSS design using both speed and electric power p503
Combined active reactive despatch. Part 2: test results p401
Controlled series compensation for improving the stability of multi-machine power systems p361
Damping of subsynchronous oscillations using adaptive controllers tuned by artificial neural networks p415
Dynamic modelling of battery energy storage system and application to power system stability p429
Fuzzy logic power system stabiliser p277
Hybrid expert system and simulated annealing approach to optimal reactive power planning p381
Modelling and control of thyristor-controlled series compensators p297
Multimachine power system stabiliser design based on new LQR approach p494
Neural network-based algorithm for power transformer differential relays p386

CONTROL SYSTEM SYNTHESIS

Anticipatory fuzzy control of power systems p211
Co-ordinated multimachine PSS design using both speed and electric power p503
Combined active and reactive despatch. I. Problem formulation and solution algorithm p393
Controlled series compensation for improving the stability of multi-machine power systems p361
Damping of subsynchronous oscillations using adaptive controllers tuned by artificial neural networks p415
Fuzzy-logic-based VAr stabiliser for power system control p618
Fuzzy logic power system stabiliser p277
Modelling and control of thyristor-controlled series compensators p297
Multimachine power system stabiliser design based on new LQR approach p494
Neural network-based algorithm for power transformer differential relays p386
Thermal generator scheduling using hybrid genetic/simulated-annealing approach p372

CONVERTORS

Dynamic modelling of battery energy storage system and application to power system stability p429
Experimental investigation of an advanced static VAr compensator p202
HVDC convertor waveform distortion: a frequency-domain analysis p88
Line conditioning system with simple control strategy and fast dynamic response p128
Modelling and control of thyristor-controlled series compensators p297
Naturally commutated thyristor-controlled high-pulse VAr compensator p219
Steady state model of the AC/DC convertor in the harmonic domain p109

DATA HANDLING

Object-oriented design of trouble call analysis system on personal computer p167

DIELECTRIC MATERIALS AND DEVICES

Experimental investigations of high-voltage motor switching surges p233

ELECTRIC DISCHARGES

Simulation of transients on transmission lines with corona via the method of characteristics p81

ELECTROMAGNETISM

Experimental validation of a numerical model of busbar systems p65
Magnetic fields from transmission lines: comparison of calculations and measurements p481

ENERGY CONVERSION

Dynamic modelling of battery energy storage system and application to power system stability p429
Maximum photovoltaic power tracking: an algorithm for rapidly changing atmospheric conditions p59

EXPERT SYSTEMS

Artificial intelligence-based machine-learning system for thermal generator scheduling p195
Hybrid expert system and simulated annealing approach to optimal reactive power planning p381
Power-demand forecasting using a neural network with an adaptive learning algorithm p560
Reactive reserve management p17
Rule-based variable-gain power system stabiliser p29

FEEDBACK

Controlled series compensation for improving the stability of multi-machine power systems p361

FILTERS AND FILTERING

New dynamic filter based on least absolute value algorithm for on-line tracking of power system harmonics p37
Performance comparison of the three-phase active-power-filter algorithms p646

FUZZY CONTROL

Anticipatory fuzzy control of power systems p211
Fuzzy-logic-based VAr stabiliser for power system control p618
Fuzzy logic power system stabiliser p277

GENERATORS

Co-ordinated multimachine PSS design using both speed and electric power p503
Dynamic modelling of battery energy storage system and application to power system stability p429
Experimental investigations of high-voltage motor switching surges p233
Identification of coherent generators by spectrum analysis p367
Implicit generator and SVC modelling for contingency scheduling of reactive power dispatch p527

INDUCTION MOTORS

Simple wind farm dynamic model p545

INSTRUMENTATION AND MEASUREMENT

Optical fibre investigation of the arc dynamics of a spiral arc current limiting interrupter p608

INSULATORS AND INSULATION

Experimental investigations of high-voltage motor switching surges p233

MAGNETIC MATERIALS AND DEVICES

Chaotic ferroresonance in power transformers p247
Conceptual design of air-core superconducting transformer for 500 kV cable transmission system p487

MATHEMATICAL TECHNIQUES

Advances in global optimisation for generation expansion planning p423
Combined active and reactive despatch. I. Problem formulation and solution algorithm p393
Constrained optimisation procedure for evaluating cyclic loading of power transformers p240
Corrective action planning to achieve a feasible optimal power flow solution p576
Detection of Jacobian singularity and network islanding in power flow computations p589
Efficient computation of rodbed grounding resistance in a homogeneous earth by Galerkin's moment method p653
Efficient methods for identifying weak nodes in electrical power networks p317
Experimental validation of a numerical model of busbar systems p65
Frequency domain technique for designing stabilisers for a power plant with identical generators p330
Frequency-independent circuit model of earth return effects in transmission systems p143
Fuzzy neural networks for time-series forecasting of electric load p535
Fuzzy-set approach to dynamic voltage security assessment p190
H_∞ optimisation-based power system stabiliser design p179
HVDC convertor waveform distortion: a frequency-domain analysis p88
Hybrid expert system and simulated annealing approach to optimal reactive power planning p381
Hydro-dominated short-term hydrothermal scheduling via a hybrid simulation-optimisation approach: a case study p569
Identification of coherent generators by spectrum analysis p367
Implicit generator and SVC modelling for contingency scheduling of reactive power dispatch p527
Iterative techniques for the solution of complex DC-rail-traction systems including regenerative braking p445
Multimachine power system stabiliser design based on new LQR approach p494
Neural network load-flow p51
New dynamic filter based on least absolute value algorithm for on-line tracking of power system harmonics p37
Optimal choice of fixed and switched capacitors in radial distributors with distorted substation voltage p24
Optimal-power-flow solution by Newton's method applied to an augmented Lagrangian function p33
Optimal pricing of transmission services: application to large power systems p263
Private investment in power and deviations from the least cost expansion plan p269
Reactive power/voltage control in a distribution substation using dynamic programming p639
Reconfiguration of radial distribution networks: application of heuristic methods on large-scale networks p631
Security-constrained multiobjective generation dispatch using bicriterion global optimisation p406
Team algorithms in distributed load flow computations p583
Thermal generator scheduling using hybrid genetic/simulated-annealing approach p372
Unit commitment by parallel simulated annealing p595

MEASUREMENT OF SPECIFIC VARIABLES

Algorithm for determining phase-angle observability in the presence of line-current-magnitude measurements p453
Magnetic fields from transmission lines: comparison of calculations and measurements p481
Optical fibre investigation of the arc dynamics of a spiral arc current limiting interrupter p608

MULTIPROCESSOR SYSTEMS

Rule-based variable-gain power system stabiliser p29

NEURAL NETS

Anticipatory fuzzy control of power systems p211
Application of radial basis function neural network model for short-term load forecasting p45
Artificial neural network-based method for transient response prediction p323
Damping of subsynchronous oscillations using adaptive controllers tuned by artificial neural networks p415
Distribution system service restoration using the artificial neural network approach and pattern recognition method p251
Fuzzy neural networks for time-series forecasting of electric load p535
Neural network-based algorithm for power transformer differential relays p386
Neural network load-flow p51
Novel approach to alternator field winding interturn fault detection p97
Power-demand forecasting using a neural network with an adaptive learning aigorithm p560

NUMERICAL ANALYSIS

Application of synchronised phasor measurements to real-time transient stability prediction p355
Chaotic ferroresonance in power transformers p247
Computer analysis of small-signal stability of power systems including network dynamics p613
Corrective action planning to achieve a feasible optimal power flow solution p576
Detection of Jacobian singularity and network islanding in power flow computations p589
Dynamic modelling of battery energy storage system and application to power system stability p429
Effect of radiative and convective heat transfer on thermal transients in power cables p436
Efficient computation of rodbed grounding resistance in a homogeneous earth by Galerkin's moment method p653
Efficient methods for identifying weak nodes in electrical power networks p317
Eigenvalue approach clustering algorithm for building equivalent models of distribution systems p282
Experimental validation of a numerical model of busbar systems p65
Group-harmonic identification in power systems with nonstationary waveforms p517
Identification of coherent generators by spectrum analysis p367
Iterative techniques for the solution of complex DC-rail-traction systems including regenerative braking p445
Neural network load-flow p51
Optimal-power-flow solution by Newton's method applied to an augmented Lagrangian function p33
Optimal pricing of transmission services: application to large power systems p263
Simulation of transients on transmission lines with corona via the method of characteristics p81
Steady state model of the AC/DC convertor in the harmonic domain p109

OPTICAL IMAGE PROCESSING

Automatic map reading for distribution system design p549

OPTIMAL CONTROL

Combined active and reactive despatch. I. Problem formulation and solution algorithm p393
Combined active reactive despatch. Part 2: test results p401
Controlled series compensation for improving the stability of multi-machine power systems p361
Hybrid expert system and simulated annealing approach to optimal reactive power planning p381
Thermal generator scheduling using hybrid genetic/simulated-annealing approach p372

OPTIMISATION

Constrained optimisation procedure for evaluating cyclic loading of power transformers p240
Corrective action planning to achieve a feasible optimal power flow solution p576
Hydro-dominated short-term hydrothermal scheduling via a hybrid simulation-optimisation approach: a case study p569
Reconfiguration of radial distribution networks: application of heuristic methods on large-scale networks p631
Security-constrained multiobjective generation dispatch using bicriterion global optimisation p406

PARALLEL PROCESSING

Efficient heuristic partitioning algorithm for parallel processing of large power systems network equations p625
Team algorithms in distributed load flow computations p583
Unit commitment by parallel simulated annealing p595

PARAMETER ESTIMATION

Group-harmonic identification in power systems with nonstationary waveforms p517
Tracking constrained adaptive power system stabiliser p149

PATTERN RECOGNITION

Distribution system service restoration using the artificial neural network approach and pattern recognition method p251

POWER ELECTRONICS

Dynamic modelling of battery energy storage system and application to power system stability p429
Experimental investigation of an advanced static VAr compensator p202
Steady state model of the AC/DC convertor in the harmonic domain p109

POWER ENGINEERING COMPUTING

Application of radial basis function neural network model for short-term load forecasting p45
Artificial intelligence-based machine-learning system for thermal generator scheduling p195
Artificial neural network-based method for transient response prediction p323
Automatic map reading for distribution system design p549
Combined active reactive despatch. Part 2: test results p401
Composite system spinning reserve assessment in interconnected systems p305
Computer analysis of small-signal stability of power systems including network dynamics p613
Controlled series compensation for improving the stability of multi-machine power systems p361
Digital simulation of fault location on EHV lines using wideband spread spectrum techniques p73
Distribution system service restoration using the artificial neural network approach and pattern recognition method p251
Dynamically corrected fast estimators of current and voltage magnitude p310
Efficient heuristic partitioning algorithm for parallel processing of large power systems network equations p625
Efficient methods for identifying weak nodes in electrical power networks p317
Eigenvalue approach clustering algorithm for building equivalent models of distribution systems p282
Frequency-independent circuit model of earth return effects in transmission systems p143
Fuzzy-logic-based VAr stabiliser for power system control p618
Fuzzy neural networks for time-series forecasting of electric load p535
Hybrid expert system and simulated annealing approach to optimal reactive power planning p381
Identification of synchronous generator saturation models based on on-line digital measurements p225
Incorporating nonlinearities of measurement function in power system dynamic state estimation p289

Maximum photovoltaic power tracking: an algorithm for rapidly changing atmospheric conditions p59
Modelling and control of thyristor-controlled series compensators p297
Network modelling of traction substation transformers for studying unbalance effects p103
Neural network-based algorithm for power transformer differential relays p386
Neural network load-flow p51
New dynamic filter based on least absolute value algorithm for on-line tracking of power system harmonics p37
New technique for the accurate location of earth faults on transmission systems p119
Novel approach to alternator field winding interturn fault detection p97
Object-oriented design of trouble call analysis system on personal computer p167
Optimal phase angles of booster transformers in HV and EHV in power systems p185
Phase-shifting transformer with fixed phase between terminal voltage and voltage boost: tool for transient stability margin enhancement p257
Power-demand forecasting using a neural network with an adaptive learning algorithm p560
Reactive reserve management p17
Reconfiguration of radial distribution networks: application of heuristic methods on large-scale networks p631
Rule-based variable-gain power system stabiliser p29
Team algorithms in distributed load flow computations p583
Unit commitment by parallel simulated annealing p595

POWER SYSTEM CONTROL

Anticipatory fuzzy control of power systems p211
Artificial intelligence-based machine-learning system for thermal generator scheduling p195
Artificial neural network-based method for transient response prediction p323
Co-ordinated multimachine PSS design using both speed and electric power p503
Combined active and reactive despatch. I. Problem formulation and solution algorithm p393
Combined active reactive despatch. Part 2: test results p401
Computer analysis of small-signal stability of power systems including network dynamics p613
Controlled series compensation for improving the stability of multi-machine power systems p361
Damping of subsynchronous oscillations using adaptive controllers tuned by artificial neural networks p415
Distribution system service restoration using the artificial neural network approach and pattern recognition method p251
Dynamic modelling of battery energy storage system and application to power system stability p429
Frequency domain technique for designing stabilisers for a power plant with identical generators p330
Fuzzy-logic-based VAr stabiliser for power system control p618
Fuzzy logic power system stabiliser p277
Fuzzy-set approach to dynamic voltage security assessment p190
H_∞ optimisation-based power system stabiliser design p179
Hybrid expert system and simulated annealing approach to optimal reactive power planning p381
Implicit generator and SVC modelling for contingency scheduling of reactive power dispatch p527
Line conditioning system with simple control strategy and fast dynamic response p128
Modelling and control of thyristor-controlled series compensators p297
Multimachine power system stabiliser design based on new LQR approach p494
Neural network-based algorithm for power transformer differential relays p386
Optimal phase angles of booster transformers in HV and EHV in power systems p185
Oscillatory interaction between synchronous generator and local voltage-dependent load p473
Reactive power/voltage control in a distribution substation using dynamic programming p639
Reactive reserve management p17
Rule-based variable-gain power system stabiliser p29
Thermal generator scheduling using hybrid genetic/simulated-annealing approach p372
Tracking constrained adaptive power system stabiliser p149

POWER SYSTEM MANAGEMENT

Advances in global optimisation for generation expansion planning p423
Anticipatory fuzzy control of power systems p211
Artificial neural network-based method for transient response prediction p323
Co-ordinated multimachine PSS design using both speed and electric power p503
Combined active and reactive despatch. I. Problem formulation and solution algorithm p393
Combined active reactive despatch. Part 2: test results p401
Composite system spinning reserve assessment in interconnected systems p305
Computer analysis of small-signal stability of power systems including network dynamics p613
Controlled series compensation for improving the stability of multi-machine power systems p361
Corrective action planning to achieve a feasible optimal power flow solution p576
Damping of subsynchronous oscillations using adaptive controllers tuned by artificial neural networks p415
Distribution system service restoration using the artificial neural network approach and pattern recognition method p251
Dynamic modelling of battery energy storage system and application to power system stability p429
Economic evaluation of reliability-centred maintenance (RCM): an electricity transmission industry perspective p9
Experimental investigation of an advanced static VAr compensator p202
Frequency domain technique for designing stabilisers for a power plant with identical generators p330
Fuzzy-logic-based VAr stabiliser for power system control p618
Fuzzy logic power system stabiliser p277
Fuzzy-set approach to dynamic voltage security assessment p190
H_∞ optimisation-based power system stabiliser design p179
Hybrid expert system and simulated annealing approach to optimal reactive power planning p381
Hydro-dominated short-term hydrothermal scheduling via a hybrid simulation-optimisation approach: a case study p569
Implicit generator and SVC modelling for contingency scheduling of reactive power dispatch p527
Line conditioning system with simple control strategy and fast dynamic response p128
Modelling and control of thyristor-controlled series compensators p297
Multimachine power system stabiliser design based on new LQR approach p494
Naturally commutated thyristor-controlled high-pulse VAr compensator p219
Neural network-based algorithm for power transformer differential relays p386
Neural network load-flow p51
Object-oriented design of trouble call analysis system on personal computer p167
Optimal phase angles of booster transformers in HV and EHV in power systems p185
Optimal pricing of transmission services: application to large power systems p263
Performance comparison of the three-phase active-power-filter algorithms p646
Private investment in power and deviations from the least cost expansion plan p269
Reactive power/voltage control in a distribution substation using dynamic programming p639
Reactive reserve management p17
Response of large industrial customers to electricity pricing by voluntary time-of-use in Taiwan p157
Rule-based variable-gain power system stabiliser p29
Security-constrained multiobjective generation dispatch using bicriterion global optimisation p406
Security evaluation of composite power systems p511
Technical and economic feasibility of conversion to a higher voltage distribution p468
Thermal generator scheduling using hybrid genetic/simulated-annealing approach p372
Tracking constrained adaptive power system stabiliser p149
Unit commitment by parallel simulated annealing p595

POWER SYSTEM PROTECTION

Digital simulation of fault location on EHV lines using wideband spread spectrum techniques p73
Dynamically corrected fast estimators of current and voltage magnitude p310
Earth fault currents and potentials distribution in composite systems p135
Efficient computation of rodbed grounding resistance in a homogeneous earth by Galerkin's moment method p653
Neural network-based algorithm for power transformer differential relays p386
Security evaluation of composite power systems p511
Stochastic modelling of high-speed reclosing in probabilistic transient stability studies p350

POWER SYSTEMS AND APPLICATIONS

Iterative techniques for the solution of complex DC-rail-traction systems including regenerative braking p445
Network modelling of traction substation transformers for studying unbalance effects p103
Response of large industrial customers to electricity pricing by voluntary time-of-use in Taiwan p157

POWER SYSTEMS AND PLANTS

Advances in global optimisation for generation expansion planning p423
Algorithm for determining phase-angle observability in the presence of line-current-magnitude measurements p453
An investigation into breaker reclosure strategy for adaptive single pole autoreclosing p601
Application of radial basis function neural network model for short-term load forecasting p45
Application of synchronised phasor measurements to real-time transient stability prediction p355
Artificial intelligence-based machine-learning system for thermal generator scheduling p195
Automatic map reading for distribution system design p549
Combined active and reactive despatch. I. Problem formulation and solution algorithm p393
Combined active reactive despatch. Part 2: test results p401
Computer analysis of small-signal stability of power systems including network dynamics p613
Controlled series compensation for improving the stability of multi-machine power systems p361
Detection of Jacobian singularity and network islanding in power flow computations p589
Digital simulation of fault location on EHV lines using wideband spread spectrum techniques p73
Distribution system service restoration using the artificial neural network approach and pattern recognition method p251
Dynamic modelling of battery energy storage system and application to power system stability p429
Dynamically corrected fast estimators of current and voltage magnitude p310
Earth fault currents and potentials distribution in composite systems p135
Efficient heuristic partitioning algorithm for parallel processing of large power systems network equations p625
Efficient methods for identifying weak nodes in electrical power networks p317
Eigenvalue approach clustering algorithm for building equivalent models of distribution systems p282
Evaluation of line loss under load unbalance using the complex unbalance factor p173
Experimental investigation of an advanced static VAr compensator p202
Experimental validation of a numerical model of busbar systems p65
Frequency-independent circuit model of earth return effects in transmission systems p143
Fuzzy-logic-based VAr stabiliser for power system control p618
Fuzzy neural networks for time-series forecasting of electric load p535
Group-harmonic identification in power systems with nonstationary waveforms p517
Hybrid expert system and simulated annealing approach to optimal reactive power planning p381
Hydro-dominated short-term hydrothermal scheduling via a hybrid simulation-optimisation approach: a case study p569
Identification of coherent generators by spectrum analysis p367
Implicit generator and SVC modelling for contingency scheduling of reactive power dispatch p527
Incorporating nonlinearities of measurement function in power system dynamic state estimation p289

Iterative techniques for the solution of complex DC-rail-traction systems including regenerative braking p445
Magnetic fields from transmission lines: comparison of calculations and measurements p481
Maximum photovoltaic power tracking: an algorithm for rapidly changing atmospheric conditions p59
Modelled operation of the Shetland Islands power system comparing computational and human operators' load forecasts p555
Modelling and control of thyristor-controlled series compensators p297
Modelling multistate problems in sequential simulation of power system reliability studies p343
Network modelling of traction substation transformers for studying unbalance effects p103
New dynamic filter based on least absolute value algorithm for on-line tracking of power system harmonics p37
New technique for the accurate location of earth faults on transmission systems p119
Object-oriented design of trouble call analysis system on personal computer p167
Optimal choice of fixed and switched capacitors in radial distributors with distorted substation voltage p24
Optimal phase angles of booster transformers in HV and EHV in power systems p185
Optimal-power-flow solution by Newton's method applied to an augmented Lagrangian function p33
Pertinent factors in the adequacy evaluation of an overall electric power system p337
Phase-shifting transformer with fixed phase between terminal voltage and voltage boost: tool for transient stability margin enhancement p257
Power-demand forecasting using a neural network with an adaptive learning algorithm p560
Private investment in power and deviations from the least cost expansion plan p269
Reactive power/voltage control in a distribution substation using dynamic programming p639
Reactive reserve management p17
Response of large industrial customers to electricity pricing by voluntary time-of-use in Taiwan p157
Simple wind farm dynamic model p545
Stochastic modelling of high-speed reclosing in probabilistic transient stability studies p350
Team algorithms in distributed load flow computations p583
Thermal generator scheduling using hybrid genetic/simulated-annealing approach p372
Unit commitment by parallel simulated annealing p595

POWER TRANSMISSION AND DISTRIBUTION

Automatic map reading for distribution system design p549
Composite system spinning reserve assessment in interconnected systems p305
Distribution system service restoration using the artificial neural network approach and pattern recognition method p251
Economic evaluation of reliability-centred maintenance (RCM): an electricity transmission industry perspective p9
Efficient heuristic partitioning algorithm for parallel processing of large power systems network equations p625
Eigenvalue approach clustering algorithm for building equivalent models of distribution systems p282
Evaluation of line loss under load unbalance using the complex unbalance factor p173
Frequency-independent circuit model of earth return effects in transmission systems p143
HVDC convertor waveform distortion: a frequency-domain analysis p88
Loss minimisation using islanding technique for district of Klang, Malaysia p523
Modelling and control of thyristor-controlled series compensators p297
New technique for the accurate location of earth faults on transmission systems p119
Optimal choice of fixed and switched capacitors in radial distributors with distorted substation voltage p24
Optimal pricing of transmission and distribution services in electricity supply p1
Optimal pricing of transmission services: application to large power systems p263
Pertinent factors in the adequacy evaluation of an overall electric power system p337
Phase-shifting transformer with fixed phase between terminal voltage and voltage boost: tool for transient stability margin enhancement p257
Reactive power/voltage control in a distribution substation using dynamic programming p639
Reconfiguration of radial distribution networks: application of heuristic methods on large-scale networks p631
Simple wind farm dynamic model p545
Simplified bidirectional-feeder models for distribution-system calculations p459
Simulation of transients on transmission lines with corona via the method of characteristics p81
Technical and economic feasibility of conversion to a higher voltage distribution p468

PREDICTIVE CONTROL

Anticipatory fuzzy control of power systems p211
Artificial neural network-based method for transient response prediction p323

PROBABILITY AND STATISTICS

Chaotic ferroresonance in power transformers p247
Composite system spinning reserve assessment in interconnected systems p305
Fuzzy neural networks for time-series forecasting of electric load p535
Modelled operation of the Shetland Islands power system comparing computational and human operators' load forecasts p555
Modelling multistate problems in sequential simulation of power system reliability studies p343
Security evaluation of composite power systems p511
Stochastic modelling of high-speed reclosing in probabilistic transient stability studies p350

PRODUCTION ENGINEERING

Economic evaluation of reliability-centred maintenance (RCM): an electricity transmission industry perspective p9
Modelling multistate problems in sequential simulation of power system reliability studies p343
Pertinent factors in the adequacy evaluation of an overall electric power system p337
Security evaluation of composite power systems p511

SELF-ADJUSTING SYSTEMS

Damping of subsynchronous oscillations using adaptive controllers tuned by artificial neural networks p415
Tracking constrained adaptive power system stabiliser p149

SIMULATION, MODELLING AND IDENTIFICATION

Tracking constrained adaptive power system stabiliser p149

STABILITY

Identification of synchronous generator saturation models based on on-line digital measurements p225
Oscillatory interaction between synchronous generator and local voltage-dependent load p473

SUPERCONDUCTING MATERIALS AND DEVICES

Conceptual design of air-core superconducting transformer for 500 kV cable transmission system p487

SWITCHGEAR

An investigation into breaker reclosure strategy for adaptive single pole autoreclosing p601
Optical fibre investigation of the arc dynamics of a spiral arc current limiting interrupter p608

SYNCHRONOUS MACHINES

Artificial neural network-based method for transient response prediction p323
Fuzzy logic power system stabiliser p277
H_∞ optimisation-based power system stabiliser design p179
Identification of synchronous generator saturation models based on on-line digital measurements p225
Multimachine power system stabiliser design based on new LQR approach p494
Novel approach to alternator field winding interturn fault detection p97
Oscillatory interaction between synchronous generator and local voltage-dependent load p473

SYSTEMS THEORY

Co-ordinated multimachine PSS design using both speed and electric power p503
Fuzzy-logic-based VAr stabiliser for power system control p618

TRANSFORMERS

Chaotic ferroresonance in power transformers p247
Conceptual design of air-core superconducting transformer for 500 kV cable transmission system p487
Constrained optimisation procedure for evaluating cyclic loading of power transformers p240
Network modelling of traction substation transformers for studying unbalance effects p103
Neural network-based algorithm for power transformer differential relays p386
Optimal phase angles of booster transformers in HV and EHV in power systems p185
Phase-shifting transformer with fixed phase between terminal voltage and voltage boost: tool for transient stability margin enhancement p257
Reactive power/voltage control in a distribution substation using dynamic programming p639

WAVEGUIDE THEORY

Digital simulation of fault location on EHV lines using wideband spread spectrum techniques p73
